NEGATIVE

ABOUT THIS TEST

The Counsyl Family Prep Screen (version 2.0) utilizes sequencing, maximizing coverage across all DNA regions tested, to help you learn about your chance to have a child with a genetic disease.

RESULTS SUMMARY

| Risk Details | DONOR 10146 | Partner |
|---|---|---------|
| Panel Information | Family Prep Screen 2.0 Universal Panel Minus X-Linked (102 conditions tested) | N/A |
| All conditions tested A complete list of all conditions tested can be found on page 4. | □ NEGATIVE No disease-causing mutations were detected. | N/A |

CLINICAL NOTES

None

NEXT STEPS

• If necessary, patients can discuss residual risks with their physician or a genetic counselor.

Methods and Limitations

DONOR 10146 [Family Prep Screen 2.0]: sequencing, targeted genotyping, spinal muscular atrophy, and analysis of homologous regions.

Sequencing

High-throughput sequencing is used to analyze the listed exons, as well as selected intergenic and intronic regions, of the genes in the Conditions Tested section of the report. These regions are sequenced to high coverage and the sequences are compared to standards and references of normal variation. Mutations may not be detected in areas of lower sequence coverage. On average, more than 99% of all bases in the exons listed for each gene are sequenced at the minimum read depth. Variants discovered in other exons of these genes will also be reported if they meet quality control criteria. Triplet repeats and large deletions and duplications may not be detected. Small insertions and deletions may not be as accurately determined as single nucleotide variants. Genes that have closely related pseudogenes are not well analyzed by this method.

Detection rates are calculated by estimating from literature the fraction of disease alleles that the methodology is unable to detect.

All variants that are a recognized cause of the disease will be reported. In addition, variants that have not previously been established as a recognized cause of disease may be identified. In these cases, only variants classified as "predicted" or "likely" pathogenic are reported. Predicted/likely pathogenic variants are described elsewhere in the report as "predicted/likely to have a negative impact on gene function". In general, predicted pathogenic variants are those which are predicted to be pathogenic based on the nature of the sequence change, while likely pathogenic variants are evaluated by reviewing reports of allele frequencies in cases and controls, functional studies, variant annotation and effect prediction, and segregation studies. Benign variants, variants of uncertain significance, and variants not directly associated with the intended disease phenotype are not reported. Literature citations validating reported variants are available upon request.

Targeted genotyping

Targeted DNA mutation analysis is used to determine the genotypes of the listed variants in the Conditions Tested section of the report.

Spinal muscular atrophy

Targeted copy number analysis is used to determine the copy number of exon 7 of the *SMN1* gene relative to other genes. Other mutations may interfere with this analysis. Some individuals with two copies of *SMN1* are carriers with two *SMN1* genes on one chromosome and a *SMN1* deletion on the other chromosome. This is more likely in individuals who have 2 copies of the *SMN1* gene and are positive for the g.27134T>G SNP, which affects the reported residual risk; Ashkenazi Jewish or Asian patients with this genotype have a high post-test likelihood of being carriers for SMA and are reported as carriers.

Analysis of homologous regions

A combination of high-throughput sequencing, read depth-based copy number analysis, and targeted genotyping is used to determine the number of functional gene copies and/or the presence of selected loss of function mutations in certain genes that have homology to other regions. The precise breakpoints of large deletions in these genes cannot be determined, but are estimated from copy number analysis. High numbers of pseudogene copies may interfere with this analysis.

If *CYP21A2* is tested, patients who have one or more additional copies of the *CYP21A2* gene and a loss of function mutation may not actually be a carrier of 21-hydroxylase-deficient congenital adrenal hyperplasia (CAH). Because the true incidence of non-classic CAH is unknown, the residual carrier and reproductive risk numbers on the report are only based on published incidences for classic CAH. However, the published prevalence of non-classic CAH is highest in individuals of Ashkenazi Jewish, Hispanic, Italian, and Yugoslav descent. Therefore, the residual and reproductive risks are likely an underestimate of overall chances for 21-hydroxylase-deficient CAH, especially in the aforementioned populations, as they do not account for non-classic CAH. If *HBA11HBA2* are tested, some individuals with four alpha globin genes may be carriers, with three genes on one chromosome and a deletion on the other chromosome. This and similar, but rare, carrier states, where complementary changes exist in both the gene and a pseudogene, may not be detected by the assay.

Limitations

In an unknown number of cases, nearby genetic variants may interfere with mutation detection. Other possible sources of diagnostic error include sample mix-up, trace contamination, bone marrow transplantation, blood transfusions and technical errors. This test is designed to detect and report germline alterations. While somatic variants present at low levels may be detected, these may not be reported. If more than one variant is detected in a gene, additional studies may be necessary to determine if those variants lie on the same chromosome or different chromosomes. The test does not fully address all inherited forms of intellectual disability, birth defects and genetic disease. A family history of any of these conditions may warrant additional evaluation. Furthermore, not all mutations will be identified in the genes analyzed and additional testing may be beneficial for some patients. For example, individuals of African, Southeast Asian, and Mediterranean ancestry are at increased risk for being carriers for hemoglobinopathies, which can be identified by CBC and hemoglobin electrophoresis or HPLC (ACOG Practice Bulletin No. 78. Obstet. Gynecol. 2007;109:229-37).

This test was developed and its performance characteristics determined by Counsyl, Inc. It has not been cleared or approved by the US Food and Drug Administration (FDA). The FDA does not require this test to go through premarket review. This test is used for clinical purposes. It should not be regarded as investigational or for research. This laboratory is certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA) as qualified to perform high-complexity clinical testing. These results are adjunctive to the ordering physician's evaluation. CLIA Number: #05D1102604.

Conditions Tested

21-hydroxylase-deficient Congenital Adrenal Hyperplasia - Gene: CYP21A2. Autosomal Recessive. Analysis of Homologous Regions. Variants (13): CYP21A2 deletion, CYP21A2 duplication, CYP21A2 triplication, G111VfsX21, I173N, L308FfsX6, P31L, Q319*, Q319*+CYP21A2dup, R357W, V281L, [I237N;V238E;M240K], c.293-13C>G. Detection Rate: Mixed or Other Caucasian 96%.

ABCC8-related Hyperinsulinism - Gene: ABCC8. Autosomal Recessive. Sequencing. Exons: NM_000352:1-39. Detection Rate: Mixed or Other Caucasian >99%. Achromatopsia - Gene: CNGB3. Autosomal Recessive. Sequencing. Exons:

NM_019098:1-18. Detection Rate: Mixed or Other Caucasian >99%.

Alkaptonuria - Gene: HGD. Autosomal Recessive. Sequencing. Exons: NM_000187:1-14. Detection Rate: Mixed or Other Caucasian >99%.

Alpha Thalassemia - Genes: HBA1, HBA2. Autosomal Recessive. Analysis of Homologous Regions. Variants (13): -(alpha)20.5, --BRIT, --MEDI, --MEDII, --SEA, --THAI or --FIL, -alpha3.7, -alpha4.2, HBA1+HBA2 deletion, Hb Constant Spring, anti3.7, anti4.2, del HS-40. Detection Rate: Unknown due to rarity of disease.

Alpha-1 Antitrypsin Deficiency - Gene: SERPINA1. Autosomal Recessive. Sequencing. Exons: NM_000295:2-5. Detection Rate: Mixed or Other Caucasian

Alpha-mannosidosis - Gene: MAN2B1. Autosomal Recessive. Sequencing. Exons: NM_000528:1-15,17-24. Detection Rate: Mixed or Other Caucasian >99%.

Alpha-sarcoglycanopathy - Gene: SGCA. Autosomal Recessive. Sequencing. Exons: NM_000023:1-9. Detection Rate: Mixed or Other Caucasian 99%.

Andermann Syndrome - Gene: SLC12A6. Autosomal Recessive. Sequencing. Exons: NM 133647:1-25. Detection Rate: Mixed or Other Caucasian >99%.

ARSACS - Gene: SACS. Autosomal Recessive. Sequencing. Exons: NM_014363:2-10. Detection Rate: Mixed or Other Caucasian 97%.

Aspartylglycosaminuria - Gene: AGA. Autosomal Recessive. Sequencing. Exons: NM_000027:1-9. Detection Rate: Mixed or Other Caucasian >99%.

Ataxia with Vitamin E Deficiency - Gene: TTPA. Autosomal Recessive. Sequencing. Exons: NM_000370:1-5. Detection Rate: Mixed or Other Caucasian >99%

Ataxia-telangiectasia - Gene: ATM. Autosomal Recessive. Sequencing. Exons: NM_000051:2-63. Detection Rate: Mixed or Other Caucasian 92%.

Bardet-Biedl Syndrome, BBS1-related - Gene: BBS1. Autosomal Recessive. Sequencing. Exons: NM_024649:1-17. Detection Rate: Mixed or Other Caucasian

Bardet-Biedl Syndrome, BBS10-related - Gene: BBS10. Autosomal Recessive. Sequencing. Exons: NM_024685:1-2. Detection Rate: Mixed or Other Caucasian

Beta-sarcoglycanopathy - Gene: SGCB. Autosomal Recessive. Sequencing. Exons: NM_000232:1-6. Detection Rate: Mixed or Other Caucasian >99%.

Biotinidase Deficiency - Gene: BTD. Autosomal Recessive. Sequencing. Exons: NM_000060:1-4. Detection Rate: Mixed or Other Caucasian >99%.

Bloom Syndrome - Gene: BLM. Autosomal Recessive. Sequencing. Exons: NM_000057:2-22. Detection Rate: Mixed or Other Caucasian 96%.

Canavan Disease - Gene: ASPA. Autosomal Recessive. Sequencing. Exons: NM_000049:1-6. Detection Rate: Mixed or Other Caucasian 94%.

Carnitine Palmitoyltransferase IA Deficiency - Gene: CPT1A. Autosomal Recessive. Sequencing. Exons: NM_001876:2-19. Detection Rate: Mixed or Other

Carnitine Palmitoyltransferase II Deficiency - Gene: CPT2. Autosomal Recessive. Sequencing. Exons: NM_000098:1-5. Detection Rate: Mixed or Other Caucasian

Cartilage-hair Hypoplasia - Gene: RMRP. Autosomal Recessive. Sequencing. Exon: NR_003051:1. Detection Rate: Mixed or Other Caucasian >99%.

Citrullinemia Type 1 - Gene: ASS1. Autosomal Recessive. Sequencing. Exons: NM_000050:3-16. Detection Rate: Mixed or Other Caucasian >99%.

CLN3-related Neuronal Ceroid Lipofuscinosis - Gene: CLN3. Autosomal Recessive. Sequencing. Exons: NM_001042432:2-16. Detection Rate: Mixed or Other Caucasian >99%.

CLN5-related Neuronal Ceroid Lipofuscinosis - Gene: CLN5. Autosomal Recessive. Sequencing. Exons: NM_006493:1-4. Detection Rate: Mixed or Other Caucasian

Cohen Syndrome - Gene: VPS13B. Autosomal Recessive. Sequencing. Exons: NM_017890:2-62. Detection Rate: Mixed or Other Caucasian 83%.

Congenital Disorder of Glycosylation Type Ia - Gene: PMM2. Autosomal Recessive. Sequencing. Exons: NM_000303:1-8. Detection Rate: Mixed or Other Caucasian >99%

Congenital Disorder of Glycosylation Type Ib - Gene: MPI. Autosomal Recessive. Sequencing. Exons: NM_002435:1-8. Detection Rate: Mixed or Other Caucasian

Congenital Finnish Nephrosis - Gene: NPHS1. Autosomal Recessive. Sequencing. Exons: NM_004646:2-23,26-27,29. Detection Rate: Mixed or Other Caucasian >99%. Costeff Optic Atrophy Syndrome - Gene: OPA3. Autosomal Recessive. Sequencing. Exons: NM_025136:1-2. Detection Rate: Mixed or Other Caucasian >99%.

Cystic Fibrosis - Gene: CFTR. Autosomal Recessive. Sequencing. Exons: NM_000492:1-27. IVS8-5T allele analysis is only reported in the presence of the R117H mutation. Detection Rate: Mixed or Other Caucasian 97%.

Cystinosis - Gene: CTNS. Autosomal Recessive. Sequencing. Exons: NM_004937:3-12. Detection Rate: Mixed or Other Caucasian >99%.

D-bifunctional Protein Deficiency - Gene: HSD17B4. Autosomal Recessive. Sequencing. Exons: NM_000414:1-24. Detection Rate: Mixed or Other Caucasian 94%

Dihydropyrimidine Dehydrogenase Deficiency - Gene: DPYD. Autosomal Recessive. Sequencing. Exons: NM_000110:1-23. Detection Rate: Mixed or Other Caucasian 93%.

Factor XI Deficiency - Gene: F11. Autosomal Recessive. Sequencing. Exons: NM_000128:2-15. Detection Rate: Mixed or Other Caucasian >99%.

Familial Dysautonomia - Gene: IKBKAP. Autosomal Recessive. Sequencing. Exons: NM_003640:2-37. Detection Rate: Mixed or Other Caucasian >99%.

Familial Mediterranean Fever - Gene: MEFV. Autosomal Recessive. Sequencing. Exons: NM_000243:1-10. Detection Rate: Mixed or Other Caucasian >99%.

Fanconi Anemia Type C - Gene: FANCC. Autosomal Recessive. Sequencing. Exons: NM_000136:2-15. Detection Rate: Mixed or Other Caucasian >99%.

FKTN-related Disorders - Gene: FKTN. Autosomal Recessive. Sequencing. Exons: NM 001079802:3-11. Detection Rate: Mixed or Other Caucasian >99%.

Galactosemia - Gene: GALT. Autosomal Recessive. Sequencing. Exons: NM_000155:1-11. Detection Rate: Mixed or Other Caucasian >99%.

Gaucher Disease - Gene: GBA. Autosomal Recessive. Analysis of Homologous Regions. Variants (10): D409V, D448H, IVS2+1G>A, L444P, N370S, R463C, R463H, R496H, V394L, p.L29Afs*18. Detection Rate: Mixed or Other Caucasian 60%.

GJB2-related DFNB1 Nonsyndromic Hearing Loss and Deafness - Gene: GJB2. Autosomal Recessive. Sequencing. Exons: NM_004004:1-2. Detection Rate: Mixed or Other Caucasian 98%.

Glutaric Acidemia Type 1 - Gene: GCDH. Autosomal Recessive. Sequencing. Exons: NM 000159:2-12. Detection Rate: Mixed or Other Caucasian >99%.

Glycogen Storage Disease Type Ia - Gene: G6PC. Autosomal Recessive. Sequencing. Exons: NM_000151:1-5. Detection Rate: Mixed or Other Caucasian >99%

Glycogen Storage Disease Type Ib - Gene: SLC37A4. Autosomal Recessive. Sequencing. Exons: NM_001164277:3-11. Detection Rate: Mixed or Other

Glycogen Storage Disease Type III - Gene: AGL. Autosomal Recessive. Sequencing. Exons: NM_000642:2-34. Detection Rate: Mixed or Other Caucasian >99%. Glycogen Storage Disease Type V - Gene: PYGM. Autosomal Recessive.

Sequencing. Exons: NM_005609:1-20. Detection Rate: Mixed or Other Caucasian

GRACILE Syndrome - Gene: BCS1L. Autosomal Recessive. Sequencing. Exons: NM_004328:3-9. Detection Rate: Mixed or Other Caucasian >99%

HADHA-related Disorders - Gene: HADHA. Autosomal Recessive. Sequencing. Exons: NM_000182:1-20. Detection Rate: Mixed or Other Caucasian >99%.

Hb Beta Chain-related Hemoglobinopathy (Including Beta Thalassemia and Sickle Cell Disease) - Gene: HBB. Autosomal Recessive. Sequencing. Exons: NM_000518:1-3. Detection Rate: Mixed or Other Caucasian 96%.

Hereditary Fructose Intolerance - Gene: ALDOB. Autosomal Recessive. Sequencing. Exons: NM_000035:2-9. Detection Rate: Mixed or Other Caucasian

Herlitz Junctional Epidermolysis Bullosa, LAMA3-related - Gene: LAMA3. Autosomal Recessive. Sequencing. Exons: NM_000227:1-16,18-38. Detection Rate: Mixed or Other Caucasian >99%.

Risk Calculations

Below are the risk calculations for all conditions tested. Since negative results do not completely rule out the possibility of being a carrier, the **residual risk** represents the patient's post-test likelihood of being a carrier and the **reproductive risk** represents the likelihood the patient's future children could inherit each disease. These risks are inherent to all carrier screening tests, may vary by ethnicity, are predicated on a negative family history and are present even after a negative test result. Inaccurate reporting of ethnicity may cause errors in risk calculation. The reproductive risk presented is based on a hypothetical pairing with a partner of the same ethnic group.

| Disease | DONOR 10146 Residual Risk | Reproductive Risk |
|---|------------------------------|----------------------|
| 21-hydroxylase-deficient Congenital Adrenal Hyperplasia | 1 in 1,400 | 1 in 310,000 |
| ABCC8-related Hyperinsulinism | 1 in 11,000 | < 1 in 1,000,000 |
| Achromatopsia | 1 in 8,600 | < 1 in 1,000,000 |
| Alkaptonuria | < 1 in 50,000 | < 1 in 1,000,000 |
| Alpha Thalassemia | Alpha globin status: aa/aa. | Not calculated |
| Alpha-1 Antitrypsin Deficiency | 1 in 3,400 | 1 in 460,000 |
| Alpha-mannosidosis | 1 in 35,000 | < 1 in 1,000,000 |
| Alpha-sarcoglycanopathy | 1 in 31,000 | < 1 in 1,000,000 |
| Andermann Syndrome | < 1 in 50,000 | < 1 in 1,000,000 |
| ARSACS | < 1 in 18,000 | < 1 in 1,000,000 |
| Aspartylglycosaminuria | < 1 in 50,000 | < 1 in 1,000,000 |
