

Open Donor: Dustin

Staff impression

Dustin has a very academically inclined mind. He is currently a post graduate student working towards his masters' degree in Civil Engineering. He is a great problem solver and loves to fix things, from an old vacuum to working on old cars.

When asked about his favorite vacations to another country, his response was; "Returning (to Kenya) in 2009, two years after collecting engineering and health data for a community water system, I helped implement the system. It is very satisfying to see your design come to life after challenges and hard work. Seeing the faces of children watch water pour from a tap for the first time will be in my mind forever."

Dustin is tall, slender, and athletic; he loves to stay active as he used to swim and compete for his Varsity high school swim team. He still swims recreationally for exercise, but loves to take part in social sports such as Ultimate Frisbee and bocce ball. He has sandy blonde hair, blue eyes, full lips, and a medium toned complexion.

This donor has an affinity for music and used to play the trombone avidly, with jazz music being his favorite genre.

When asked what words he would use to describe his personality and character he replied, "Trustworthy, helpful, friendly, fun, courteous, kind, handy, thrifty, and clean." We whole heartedly agree.
